

Project Design Phase Proposed Solution Template

Date	20 February 2026
Team ID	LTVIP2026TMIDS34731
Project Name	HouseHunt-Finding Your Prefect Rental Home
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional rental property management systems lack proper digitization and structured role-based accessibility. Managing property listings, renters, owners, and booking requests manually leads to inefficiencies, data inconsistencies, delayed confirmations, and poor communication between stakeholders. Without a centralized digital platform, property availability tracking, inquiry handling, and booking approvals become error-prone and time-consuming, reducing overall user satisfaction and operational efficiency.
2.	Idea / Solution description	BookNest is a MERN stack-based online bookstore platform offering a seamless experience for Users, SHouseHunt is a MERN stack-based rental property platform that delivers a seamless experience for Renters, Property Owners, and Admins. It enables property owners to add, update, and manage rental listings; renters to browse, filter, and send booking inquiries; and administrators to monitor user activity, approve owners, and oversee overall platform operations to ensure security and transparency. ellers, and Admins. It allows sellers to add/manage books, users to browse and order books, and admins to oversee operations.
3.	Novelty / Uniqueness	The platform implements role-based dashboards (Renter, Owner, Admin) and streamlines the property inquiry and booking workflow with features such as real-time booking status updates, JWT-based authentication, and a fully responsive user interface built using modern React components.

		The system ensures secure access control, structured property management, and seamless communication between renters and property owners, while enabling administrators to monitor and regulate platform activities efficiently.
4.	Social Impact / Customer Satisfaction	Renters benefit from a simplified and structured property discovery experience, with easy browsing, filtering, and booking inquiry features. Property owners can efficiently manage their listings, update availability, and respond to rental requests through a dedicated dashboard. Administrators gain centralized control over user verification, property moderation, and platform activities, improving transparency, operational efficiency, and overall satisfaction for all stakeholders.
5.	Business Model (Revenue Model)	HouseHunt can be scaled into a SaaS-based rental management platform for independent property owners, real estate agencies, and small housing communities. It can also be adapted for use by hostels, PG accommodations, and student housing providers to manage property listings and rental workflows digitally. The platform can be monetized through premium property listings, subscription plans for owners, featured property advertisements, and integrated payment gateway commissions for secure rental transactions.
6.	Scalability of the Solution	The solution is built on a scalable MERN-based architecture capable of handling high user traffic and increasing property listings without performance degradation. Its modular backend design allows seamless integration of additional features such as secure payment gateways, rental agreement digitization, property reviews, and analytics dashboards. The platform can also be expanded into a full-scale real estate marketplace connecting property owners, real estate agencies, brokers,

		and housing communities across multiple cities and regions.
