### Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

### Example: (Simplified)

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

### Example: DFD Level 0 (Industry Standard)

## User Stories

Use the below template to list all the user stories for the product.

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task                                                         | Acceptance criteria                                                       | Priority | Release  |
|-----------|-------------------------------|-------------------|---------------------------------------------------------------------------|---------------------------------------------------------------------------|----------|----------|
| Renter    | Registration & Login          | USN-1             | As a renter, I can create an account and log in securely.                 | User is redirected to the dashboard with an <b>Auth token</b> stored.     | High     | Sprint-1 |
| Renter    | Property Discovery            | USN-2             | As a renter, I can filter properties by <b>location, BHK, and price</b> . | Filtered property list is displayed in real-time.                         | High     | Sprint-2 |
| Renter    | Property Inquiry              | USN-3             | As a renter, I can send my details to an owner for a property I like.     | Inquiry appears in the user's booking section as <b>"Pending"</b> .       | High     | Sprint-2 |
| Owner     | Property Management           | USN-4             | As an owner, I can <b>add, edit, and delete</b> my property listings.     | CRUD operations update the property database immediately.                 | High     | Sprint-3 |
| Owner     | Booking Approval              | USN-5             | As an owner, I can approve or confirm a renter's booking request.         | Renter receives a notification and status changes to <b>"Confirmed"</b> . | Medium   | Sprint-3 |
| Admin     | Platform Governance           | USN-6             | As an admin, I can <b>approve owner accounts</b> and monitor activity.    | Only approved owners can post active property listings.                   | Medium   | Sprint-4 |
