

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	20 February 2026
Team ID	LTVIP2026TMIDS34731
Project Name	HouseHunt-Finding Your Prefect Rental Home
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Identity Management	Renters, Owners, and Admins can register and log in securely using JWT tokens .
FR-2	Property Management	Owners can add, update, and delete property listings with images, prices, locations, and BHK details.
FR-3	Search & Discovery	Renters can browse all listings and apply filters for location, price range, property type, and furnished status.
FR-4	Booking Workflow	Renters can send inquiries with their details, and Owners can update the booking status to "confirmed" or "pending".
FR-5	Owner Dashboard	Owners can manage their properties, track incoming inquiries, and update occupancy availability.
FR-6	Admin Governance	Admins can verify and approve legitimate Owner accounts and monitor platform activity for security.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The interface built with Bootstrap/Material UI should be responsive and intuitive across all devices for Renters and Owners.
NFR-2	Security	Implement role-based access control (RBAC), JWT authentication , and secure MongoDB data handling.
NFR-3	Reliability	Property CRUD operations and user sessions must maintain data integrity without breaking during regular use.
NFR-4	Performance	Property search results, image loading, and dashboard transitions should occur within 2 seconds .
NFR-5	Availability	The HouseHunt platform should maintain 24/7 uptime with minimal disruptions for active renters.

NFR-6	Scalability	The architecture should accommodate an increasing number of property listings and concurrent user inquiries via cloud deployment.
