

Project Development Phase
Model Performance Test

Date	20 February 2026
Team ID	LTVIP2026TMIDS65007
Project Name	HouseHunt- Your Prefect Rental Home
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	Model Summary	This is a full-stack MERN (MongoDB, Express.js, React.js, Node.js) rental platform with role-based access (Admin, Owner, Renter) and secure JWT authentication. It enables property management, booking requests, status tracking, and provides a responsive, modular user interface.	
2.	Accuracy	All core functionalities have been tested and verified: • Renter and Owner registration & secure login • Owner dashboard for managing property listings • Admin panel for managing users, properties, and bookings • Booking request and approval workflow tested end-to-end	

3.	Performance Testing	- Here is the shortened and aligned version for your HouseHunt project: • Backend API response time: < 300ms on local server • Frontend load time: ~1.5s average (React + Vite) • MongoDB optimized using indexes and efficient population queries • Routes secured with JWT middleware and lazy-loaded for improved performance	
3.	Fine Tuning Result(if Done)	- esolved duplicate navbar rendering during role switching Enhanced JWT token handling with automatic logout on expiry Optimized property image loading and preview performance Implemented custom 404 (Not Found) and 403 (Unauthorized) fallback pages
